

Indoors Outdoors Blinds & Shades

Channel – IT Blinds – Technical Data Sheet

Channel It Blinds

Beautiful, Simple, A new dimension in outdoor blinds! State of the art, a better alternative!

Enclose your pergola or carport.

Privacy, Insulation, Light Control, Wind Protection, No Bottom Gap

During Installation CHANNEL IT can be configured for

- ⊗ Spring Operation
- ⊗ Gearbox Operation
- ⊗ Electric Remote control motors
- ⊗ Stopping in multiple positions
- ⊗ Fitting flush to the floor (if floor is level and flat)

CHANNEL IT ensures your privacy, no one can look around the edge of the blind, when the blind is down it adds to the security of your home.

CHANNEL IT will help in insulating the home from weather extremes , by keeping the wind away and reducing glare on hot days.

CHANNEL IT controls the light getting into your room. Beside and translucency of the fabric, light does not flood in on the sides as in standard blinds.

Indoors Outdoors **Blinds & Shades**

Size Limitations

Channel IT blinds can be made up to 5m wide and 3.6m Drop. We reserve the right to down size these limitations depending on location, structure and wind load. We warranty all sizes we make. We believe companies who will make a size above there size limitation on the condition that there is no warranty are disreputable and are acting outside of the fit for purpose legislation.

Obtaining a Quote

Call us on 1300 66 77 35 for a free measure and quote. Or measure the height at either end of the opening and the width at top and bottom. Measure exactly to the millimetre. Call us on 1300 66 77 35 and we will price the job on the phone.

Indoors Outdoors **Blinds & Shades**

Channel – IT Blinds – Technical Data Sheet

Clear, Tint or solid colours

We offer both the tint is more expensive Tint helps cut down the light passing through. Solid PVC (Full Block out) colours can be used for the total blind or part. Standard Colours are Ivory (Crème), Maroon and Dark Green. Non standard colours are additional, the non standard colours are teal, dark blue, black, gold, white, light blue and red.

Council Approval

No council approval is needed for domestic installation of this product. Some commercial jobs on street fronts may need to go through council. We can help with this process.

Frequently Asked Questions

What type of Clear PVC do you use?

We are very particular and will only source our clear PVC from one company. It is Japanese film; they make the best film in the world. It is by no means the cheapest film we can source but it is the best.

What thickness and Grade?

We use 0.75mm Film, it is always 1st grade. We have experience in using 1mm and 2mm films for commercial jobs on gearbox and motorized blinds. We consider these heavier films to be overkill and they make the blinds harder to roll up. Thicker films add considerably to the price as well. The industry standard is 0.75mm.

Do you powder coat your components?

Yes we powder coat all the components standard in the price. Some companies will charge up to \$5 a metre of this - so beware. Our standard colours are Smooth Crème, Caulfield Green, River gum green, Slate Grey, White, Heritage Red and we have a non powder coated anodized mill finish (silver in other words).

Will you blinds go yellow and brittle?

Japanese film does not go yellow and brittle, we have been using the same supplier for 8 years and are happy to say that we have not had any blinds yellow or go brittle.

Do you have Clear, Tint or solid colours?

We offer both the tint is more expensive Tint helps cut down the light passing through. Solid PVC (Full Block out) colours can be used for the total blind or part. Standard Colours are Ivory (Crème), Maroon and Dark Green. Non standard colours are additional, the non standard colours are teal, dark blue, black, gold, white, light blue and red.

Is there any cost difference if you are installing on wood, metal or masonry structures?

Indoors Outdoors **Blinds & Shades**

structural concrete. Very high jobs may also involve a scaffolding cost. Generally we charge the standard installation price but we reserve the right on site inspection to charge additional for difficult work e.g. Structural steel and

Are there different ratios on your gearboxes?

Depending on the size of your blinds they will come with a different ration of gearbox. Either 3:1, 7:1 or 11:1

Do I need Council Approval?

No council approval is needed for domestic installation of this product. Some commercial jobs on street fronts may need to go through council. We can help with this process. Commercial jobs may need to be approved in some council areas.

One of my areas slopes, can you handle this?

No Channel it is only for rectangular areas.

Care Instructions for Blinds

The following Steps will prolong the life of your blinds and keep them looking good.

- ⊗ Leave the blinds rolled down and fastened as much as possible.
- ⊗ Wash blinds regularly with warm water and add a little dish washing detergent a car sponge and chamois can be used, nothing abrasive should be used
- ⊗ Try to roll and unroll in warmest part of the day
- ⊗ When rolling try to keep smooth and keep creases out, the blinds have a memory, sunlight will help remove any creases
- ⊗ Do not roll up when wet, if blinds appear white and milkish let the dry out and they will return to clear
- ⊗ When using hold up straps at top of blind make sure blind is not creased and release the pulley kit tension to minimize creasing

We recommend and sell Plexus Spray to rejuvenate Clear PVC Blinds.

Technical Info

Cafe Blinds are transparent, not reinforced, plastic film. As with all plastic it expands and contracts significantly with changes in temperature. Temperature also affects the flexibility of the film making it more difficult to operate when cold. Due to it being a non reinforced film (unlike canvas or reinforced PVC's it expands and contracts more than these traditional blind materials. The impact of expansion and contraction can be minimized by adopting the user guidelines above.
